

Purpose-built cloud storage for Veeam Data Platform

Extend your Veeam environment with open, reliable cloud storage that puts you in control of recovery.

Solution overview

Your backup strategy is only as strong as your storage foundation. Backblaze B2 offers a secure, scalable cloud object storage platform that enhances your Veeam environment. As a Veeam Ready Object partner, Backblaze supports your 3-2-1-1-0 strategy and beyond with virtually air-gapped, immutable storage for all backup jobs.

Protect workloads across VMware, Hyper-V, Nutanix AHV, Proxmox environments, and Kubernetes deployments—including Microsoft 365 and cloud-native applications. With Backblaze B2, your data protection strategy has the flexibility needed to meet today's evolving challenges—from rapid data growth to emerging cyber threats. Should disaster strike, your backup data remains securely stored, ready for rapid recovery.

Top benefits

- **Advanced data protection:** Keep your backup data secure with immutable storage via Object Lock, designed for 11 nines of durability, and SOC 2 Type 2 compliance.
- **Superior performance:** Upload your backups faster with small file transfers up to 30% quicker than AWS S3.
- **Recover without hidden fees:** Test your disaster recovery plan or restore data with confidence using 3x free egress monthly.

“ S3 compatible Backblaze object storage is a really resilient way to recover from something that could be the end of days for a business.”

—Rick Vanover, CTO, Veeam

Backblaze B2 offers two flexible deployment options for your Veeam environment:

Scale-Out Backup Repository

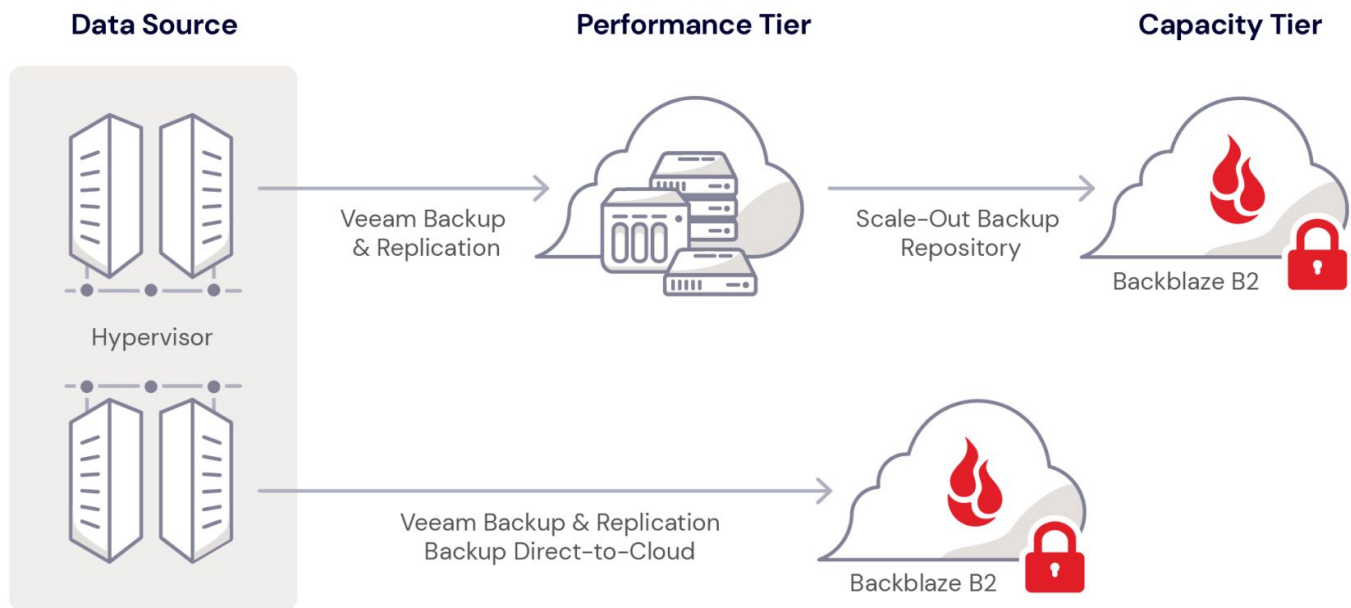

Extend Veeam infrastructure by adding Backblaze B2 as a Capacity Tier, allowing you to:

- Keep recent backups locally for faster recovery.
- Automatically move older backups to B2 for affordable long-term storage.
- Scale your coverage without adding extra local hardware.

Direct-to-Object Backup

Send backups directly to Backblaze B2, perfect for organizations looking to:

- Eliminate on-premises storage management for backups.
- Reduce extra complexity by backing up straight to cloud.
- Lower overall capital and operational expenses.
